

Dear Employment Agency Key Appointment Holders,

1. From 1 November 2021, all work pass holders, including Migrant Domestic Workers (MDWs), are required to be fully vaccinated before arrival in Singapore. Unless the MDW is entering Singapore via other industry initiatives with tightened end-to-end safe management processes, she must be fully vaccinated before the date of arrival.

2. To verify their vaccination status, the MDWs must take a serology test within 14 days of completing their Stay Home Notice (SHN) so that their vaccination records can be ingested into the National Immunisation Registry. Your EA should either:

A. **Take the MDW for a serology test;** or

B. If the employer prefers to make his/her own arrangement for the serology test, **remind employer in writing on vaccination entry requirements and timeline for the serology test.** EAs can refer to Annex below on the key instructions to employers.

3. For more information on vaccination entry requirement, please refer to [SafeTravel's website](#).

4. MOM may take administrative action, including imposition of demerit points, if EAs fail to facilitate serology testing for their MDWs post arrival.

KEVIN TEOH (MR)
Commissioner for Employment Agencies
Ministry of Manpower

Annex

If your MDW has been vaccinated in her home country, you are required to have her overseas vaccination record recognised within 14 days of completing their SHN by:

- Ensuring that she has her original hard copy or digital vaccination certificate. If your MDW's vaccination document is not in English, have it translated by a translation service provider, embassy, or notary public.
- Bringing her to a healthcare provider (refer to phpc.gov.sg for a list, and call ahead to check), who will review her vaccination document. The healthcare provider will perform a serology test, and then update her vaccination record with the National Immunisation Registry (NIR), should her serology test result be positive.

She will then be able to see her vaccination status on TraceTogether or HealthHub app within 24 hours, after the clinic has notified the NIR. Refer to this [link](#) for more information.
